SUCCESS BASICS

Egg Carton Count

Make the numbers from 1 - 6 or 1 - 12 to put in the bottom of either an egg carton space or a muffin tin space. Have your child count out that many pieces of something (acorns, rice, cereal, etc.) and put them in that slot.

What this is teaching:

- Your child is seeing the numbers and learning that they represent "how many."
- Your child is practicing counting items, which will help them with estimating items as they grow older.
