## Write in Rice

Spread rice (salt, cornmeal, etc.) on a cookie sheet. Show your child how to write numbers. You can put a sheet of paper under the rice so your child can trace the number. A number that is significant to your child is their age.

### What this is teaching:

- a) Your child learns that different numbers have different looks.
- b) Your child has the sensory experience of "feeling" the number being made. With more senses involved, some children will learn faster.
